
Python OPC-UA Documentation

Release 1.0

Olivier Roulet-Dubonnet

Sep 15, 2017

Contents

1	OPC-UA Server Class	3
2	OPC-UA Client Class	9
3	High level Functions and Node Class	13
4	Subscription Class	19
5	opcua package	21
5.1	Subpackages	21
5.2	Submodules	306
5.3	opcua.tools module	306
5.4	Module contents	306
6	Indices and tables	307
	Python Module Index	309

Pure Python OPC-UA / IEC 62541 Client and Server Python 2, 3 and pypy . <http://freeopcua.github.io/>, <https://github.com/FreeOpcUa/python-opcua>

OPC-UA implementation is quasi complete and has been tested against many different OPC-UA stacks. API offers both a low level interface to send and receive all UA defined structures and high level classes allowing to write a server or a client in a few lines. It is easy to mix high level objects and low level UA calls in one application.

Most code is autogenerated from xml specification using same code as the one that is used for freeopcua C++ client and server, thus adding missing fonctionnality to client and server should be trivial.

Some documentation is available at <http://python-opcua.readthedocs.org/en/latest/>

A simple GUI client is available: <https://github.com/FreeOpcUa/opcua-client-gui>

Examples: <https://github.com/FreeOpcUa/python-opcua/tree/master/examples>

Minimal client example: <https://github.com/FreeOpcUa/python-opcua/blob/master/examples/client-minimal.py> Minimal server example: <https://github.com/FreeOpcUa/python-opcua/blob/master/examples/server-minimal.py>

Contents:

OPC-UA Server Class

class `opcua.server.server.Server` (*shelffile=None, iserver=None*)

High level Server class

This class creates an opcua server with default values

Create your own namespace and then populate your server address space using use the `get_root()` or `get_objects()` to get Node objects. and `get_event_object()` to fire events. Then start server. See `example_server.py` All methods are threadsafe

If you need more flexibility you call directly the Ua Service methods on the `iserver` or `iserver.isession` object members.

During startup the standard address space will be constructed, which may be time-consuming when running a server on a less powerful device (e.g. a Raspberry Pi). In order to improve startup performance, a optional path to a cache file can be passed to the server constructor. If the parameter is defined, the address space will be loaded from the cache file or the file will be created if it does not exist yet. As a result the first startup will be even slower due to the cache file generation but all further start ups will be significantly faster.

Variables

- **application_uri** (*uri*) –
- **product_uri** (*uri*) –
- **name** (*string*) –
- **default_timeout** (`InternalServer`) – timeout in milliseconds for sessions and secure channel
- **iserver** – internal server object
- **bserver** (`BinaryServer`) – binary protocol server
- **nodes** (*Shortcuts*) – shortcuts to common nodes

allow_remote_admin (*allow*)

Enable or disable the builtin Admin user from network clients

create_custom_data_type (*idx, name, basetype=24, properties=None*)

create_custom_event_type (*idx, name, basetype=2041, properties=None*)

create_custom_object_type (*idx, name, basetype=58, properties=None, variables=None, methods=None*)

create_custom_variable_type (*idx, name, basetype=62, properties=None, variables=None, methods=None*)

create_subscription (*period, handler*)
 Create a subscription. returns a Subscription object which allow to subscribe to events or data on server

dehistorize_node_data_change (*node*)
 Stop historizing supplied nodes; see history module Args:
 node: node or list of nodes that can be historized (UA variables/properties)
 Returns:

dehistorize_node_event (*node*)
 Stop historizing events from node (typically a UA object); see history module Args:
 node: node or list of nodes that can be historized (UA objects)
 Returns:

delete_nodes (*nodes, recursive=False*)

disable_clock (*val=True*)
 for debugging you may want to disable clock that write every second to address space

export_xml (*nodes, path*)
 Export defined nodes to xml

export_xml_by_ns (*path, namespaces=None*)
 Export nodes of one or more namespaces to an XML file. Namespaces used by nodes are always exported for consistency. Args:
 server: opc ua server to use path: name of the xml file to write namespaces: list of string uris or int indexes of the namespace to export, if not provide all ns are used except 0
 Returns:

find_servers (*uris=None*)
 find_servers. mainly implemented for symmetry with client

get_client_to_discovery (*url='opc.tcp://localhost:4840'*)
 Create a client to discovery server and return it

get_endpoints ()

get_event_generator (*etype=None, source=2253*)
 Returns an event object using an event type from address space. Use this object to fire events

get_namespace_array ()
 get all namespace defined in server

get_namespace_index (*uri*)
 get index of a namespace using its uri

get_node (*nodeid*)
 Get a specific node using NodeId object or a string representing a NodeId

get_objects_node ()
 Get Objects node of server. Returns a Node object.

get_root_node()

Get Root node of server. Returns a Node object.

get_server_node()

Get Server node of server. Returns a Node object.

historize_node_data_change (*node, period=datetime.timedelta(7), count=0*)

Start historizing supplied nodes; see history module Args:

node: node or list of nodes that can be historized (variables/properties) period: time delta to store the history; older data will be deleted from the storage count: number of changes to store in the history

Returns:

historize_node_event (*node, period=datetime.timedelta(7), count=0*)

Start historizing events from node (typically a UA object); see history module Args:

node: node or list of nodes that can be historized (UA objects) period: time delta to store the history; older data will be deleted from the storage count: number of events to store in the history

Returns:

import_xml (*path*)

Import nodes defined in xml

link_method (*node, callback*)

Link a python function to a UA method in the address space; required when a UA method has been imported to the address space via XML; the python executable must be linked manually Args:

node: UA method node callback: python function that the UA method will call

Returns:

load_certificate (*path*)

load server certificate from file, either pem or der

load_private_key (*path*)

register_namespace (*uri*)

Register a new namespace. Nodes should in custom namespace, not 0.

register_to_discovery (*url='opc.tcp://localhost:4840', period=60*)

Register to an OPC-UA Discovery server. Registering must be renewed at least every 10 minutes, so this method will use our asyncio thread to re-register every period seconds if period is 0 registration is not automatically renewed

set_application_uri (*uri*)

Set application/server URI. This uri is supposed to be unique. If you intent to register your server to a discovery server, it really should be unique in your system! default is : “urn:freeopcua:python:server“

set_endpoint (*url*)

set_server_name (*name*)

start ()

Start to listen on network

stop ()

Stop server

subscribe_server_callback (*event, handle*)

unregister_to_discovery (*url='opc.tcp://localhost:4840'*)

stop registration thread

```
unsubscribe_server_callback (event, handle)

class opcua.server.internal_server.InternalServer (shelffile=None)

    add_endpoint (endpoint)

    create_session (name, user=<User.Anonymous: 1>, external=False)

    disable_history_data_change (node)
        Set attribute Historizing of node to False and stop storing data for history

    disable_history_event (source)
        Set attribute History Read of node to False and stop storing data for history

    dump_address_space (path)
        Dump current address space to path

    enable_history_data_change (node, period=datetime.timedelta(7), count=0)
        Set attribute Historizing of node to True and start storing data for history

    enable_history_event (source, period=datetime.timedelta(7), count=0)
        Set attribute History Read of object events to True and start storing data for history

    find_servers (params)

    get_endpoints (params=None, sockname=None)

    get_new_channel_id ()

    load_address_space (path)
        Load address space from path

    load_standard_address_space (shelffile=None)

    register_server (server, conf=None)

    register_server2 (params)

    setup_nodes ()
        Set up some nodes as defined by spec

    start ()

    stop ()

    subscribe_server_callback (event, handle)
        Create a subscription from event to handle

    unsubscribe_server_callback (event, handle)
        Remove a subscription from event to handle

class opcua.server.internal_server.InternalSession (internal_server, aspace, submgr,
                                                    name, user=<User.Anonymous: 1>,
                                                    external=False)

    activate_session (params)

    add_method_callback (methodid, callback)

    add_nodes (params)

    add_references (params)

    browse (params)

    call (params)
```

```
close_session(delete_subs=True)
create_monitored_items(params)
create_session(params, sockname=None)
create_subscription(params, callback)
delete_monitored_items(params)
delete_nodes(params)
delete_references(params)
delete_subscriptions(ids)
get_endpoints(params=None, sockname=None)
history_read(params)
modify_monitored_items(params)
publish(acks=None)
read(params)
republish(params)
translate_browsepaths_to_nodeids(params)
write(params)

class opcua.server.binary_server_asyncio.BinaryServer(internal_server, hostname, port)

    set_policies(policies)
    start()
    stop()
```

OPC-UA Client Class

class `opcua.client.client.Client` (*url, timeout=4*)

High level client to connect to an OPC-UA server.

This class makes it easy to connect and browse address space. It attempts to expose as much functionality as possible but if you want more flexibility it is possible and advised to use `UaClient` object, available as `self.uaclient` which offers the raw OPC-UA services interface.

activate_session (*username=None, password=None, certificate=None*)

Activate session using either username and password or private_key

close_secure_channel ()

close_session ()

Close session

connect ()

High level method Connect, create and activate session

connect_and_find_servers ()

Connect, ask server for a list of known servers, and disconnect

connect_and_find_servers_on_network ()

Connect, ask server for a list of known servers on network, and disconnect

connect_and_get_server_endpoints ()

Connect, ask server for endpoints, and disconnect

connect_socket ()

connect to socket defined in url

create_session ()

send a `CreateSessionRequest` to server with reasonable parameters. If you want to modify settings look at code of this methods and make your own

create_subscription (*period, handler*)

Create a subscription. returns a `Subscription` object which allow to subscribe to events or data on server handler argument is a class with `data_change` and/or event methods. period argument is either a publishing interval in milliseconds or a `CreateSubscriptionParameters` instance. The second option should be used,

if the opcua-server has problems with the default options. These methods will be called when notification from server are received. See `example-client.py`. Do not do expensive/slow or network operation from these methods since they are called directly from receiving thread. This is a design choice, start another thread if you need to do such a thing.

delete_nodes (*nodes*, *recursive=False*)

disconnect ()

High level method Close session, secure channel and socket

disconnect_socket ()

export_xml (*nodes*, *path*)

Export defined nodes to xml

static find_endpoint (*endpoints*, *security_mode*, *policy_uri*)

Find endpoint with required security mode and policy URI

find_servers (*uris=None*)

send a FindServer request to the server. The answer should be a list of servers the server knows about A list of uris can be provided, only server having matching uris will be returned

find_servers_on_network ()

get_endpoints ()

get_namespace_array ()

get_namespace_index (*uri*)

get_node (*nodeid*)

Get node using NodeId object or a string representing a NodeId

get_objects_node ()

get_root_node ()

get_server_node ()

import_xml (*path*)

Import nodes defined in xml

load_client_certificate (*path*)

load our certificate from file, either pem or der

load_private_key (*path*)

Load user private key. This is used for authenticating using certificate

load_type_definitions (*nodes=None*)

open_secure_channel (*renew=False*)

Open secure channel, if renew is True, renew channel

register_namespace (*uri*)

Register a new namespace. Nodes should in custom namespace, not 0. This method is mainly implemented for symetry with server

register_server (*server*, *discovery_configuration=None*)

register a server to discovery server if discovery_configuration is provided, the newer register_server2 service call is used

send_hello ()

Send OPC-UA hello to server

server_policy_id (*token_type, default*)

Find PolicyId of server's UserTokenPolicy by token_type. Return default if there's no matching UserTokenPolicy.

server_policy_uri (*token_type*)

Find SecurityPolicyUri of server's UserTokenPolicy by token_type. If SecurityPolicyUri is empty, use default SecurityPolicyUri of the endpoint

set_password (*pwd*)

Set user password for the connection. initial password from the URL will be overwritten

set_security (*policy, certificate_path, private_key_path, server_certificate_path=None, mode=<MessageSecurityMode.SignAndEncrypt: 3>*)

Set SecureConnection mode. Call this before connect()

set_security_string (*string*)

Set SecureConnection mode. String format: Policy,Mode,certificate,private_key[,server_private_key] where Policy is Basic128Rsa15 or Basic256,

Mode is Sign or SignAndEncrypt certificate, private_key and server_private_key are

paths to .pem or .der files

Call this before connect()

set_user (*username*)

Set user name for the connection. initial user from the URL will be overwritten

class `opcua.client.ua_client.UaClient` (*timeout=1*)

low level OPC-UA client.

It implements (almost) all methods defined in opcua spec taking in argument the structures defined in opcua spec.

In this Python implementation most of the structures are defined in uaprotocol_auto.py and uaprotocol_hand.py available under opcua.ua

activate_session (*parameters*)

add_nodes (*nodestoadd*)

add_references (*refs*)

browse (*parameters*)

browse_next (*parameters*)

call (*methodstocall*)

close_secure_channel ()

close secure channel. It seems to trigger a shutdown of socket in most servers, so be prepare to reconnect

close_session (*deletesubscriptions*)

connect_socket (*host, port*)

connect to server socket and start receiving thread

create_monitored_items (*params*)

create_session (*parameters*)

create_subscription (*params, callback*)

delete_monitored_items (*params*)

delete_nodes (*params*)

delete_references (*refs*)
delete_subscriptions (*subscriptionids*)
disconnect_socket ()
find_servers (*params*)
find_servers_on_network (*params*)
get_endpoints (*params*)
history_read (*params*)
modify_monitored_items (*params*)
open_secure_channel (*params*)
publish (*acks=None*)
read (*parameters*)
register_server (*registered_server*)
register_server2 (*params*)
send_hello (*url*)
set_security (*policy*)
translate_browsepaths_to_nodeids (*browsepaths*)
write (*params*)

High level Functions and Node Class

High level node object, to access node attribute and browse address space

class `opcua.common.node.Node` (*server, nodeid*)

High level node object, to access node attribute, browse and populate address space. Node objects are useful as-is but they do not expose the entire OPC-UA protocol. Feel free to look at the code of this class and call directly UA services methods to optimize your code

get_browse_name ()

Get browse name of a node. A browse name is a QualifiedName object composed of a string(name) and a namespace index.

get_display_name ()

get description attribute of node

get_data_type ()

get data type of node as NodeId

get_data_type_as_variant_type ()

get data type of node as VariantType This only works if node is a variable, otherwise type may not be convertible to VariantType

get_access_level ()

Get the access level attribute of the node as a set of AccessLevel enum values.

get_user_access_level ()

Get the user access level attribute of the node as a set of AccessLevel enum values.

get_event_notifier ()

Get the event notifier attribute of the node as a set of EventNotifier enum values.

set_event_notifier (*values*)

Set the event notifier attribute.

Parameters *values* – an iterable of EventNotifier enum values.

get_node_class ()

get node class attribute of node

get_description()
 get description attribute class of node

get_value()
 Get value of a node as a python type. Only variables (and properties) have values. An exception will be generated for other node types.

get_data_value()
 Get value of a node as a DataValue object. Only variables (and properties) have values. An exception will be generated for other node types. DataValue contain a variable value as a variant as well as server and source timestamps

set_array_dimensions(value)
 Set attribute ArrayDimensions of node make sure it has the correct data type

get_array_dimensions()
 Read and return ArrayDimensions attribute of node

set_value_rank(value)
 Set attribute ArrayDimensions of node

get_value_rank()
 Read and return ArrayDimensions attribute of node

set_value(value, varianttype=None)
 Set value of a node. Only variables(properties) have values. An exception will be generated for other node types. value argument is either: * a python built-in type, converted to opc-ua optionnaly using the varianttype argument. * a ua.Variant, varianttype is then ignored * a ua.DataValue, you then have full control over data send to server

set_data_value(value, varianttype=None)
 Set value of a node. Only variables(properties) have values. An exception will be generated for other node types. value argument is either: * a python built-in type, converted to opc-ua optionnaly using the varianttype argument. * a ua.Variant, varianttype is then ignored * a ua.DataValue, you then have full control over data send to server

set_writable(writable=True)
 Set node as writable by clients. A node is always writable on server side.

set_attr_bit(attr, bit)

unset_attr_bit(attr, bit)

set_read_only()
 Set a node as read-only for clients. A node is always writable on server side.

set_attribute(attributeid, datavalue)
 Set an attribute of a node attributeid is a member of ua.AttributeIds datavalue is a ua.DataValue object

get_attribute(attr)
 Read one attribute of a node result code from server is checked and an exception is raised in case of error

get_attributes(attrs)
 Read several attributes of a node list of DataValue is returned

get_children(refs=33, nodeclassmask=<NodeClass.Unspecified: 0>)
 Get all children of a node. By default hierarchical references and all node classes are returned. Other reference types may be given: References = 31 NonHierarchicalReferences = 32 HierarchicalReferences = 33 HasChild = 34 Organizes = 35 HasEventSource = 36 HasModellingRule = 37 HasEncoding = 38 HasDescription = 39 HasTypeDefinition = 40 GeneratesEvent = 41 Aggregates = 44 HasSubtype = 45 HasProperty = 46 HasComponent = 47 HasNotifier = 48 HasOrderedComponent = 49

get_properties()
return properties of node. properties are child nodes with a reference of type HasProperty and a NodeClass of Variable

get_variables()
return variables of node. properties are child nodes with a reference of type HasComponent and a NodeClass of Variable

get_methods()
return methods of node. properties are child nodes with a reference of type HasComponent and a NodeClass of Method

get_children_descriptions (*refs=33, nodeclassmask=<NodeClass.Unspecified: 0>, includesubtypes=True*)

get_encoding_refs()

get_description_refs()

get_references (*refs=31, direction=<BrowseDirection.Both: 2>, nodeclassmask=<NodeClass.Unspecified: 0>, includesubtypes=True*)
returns references of the node based on specific filter defined with:

refs = ObjectId of the Reference
direction = Browse direction for references
nodeclassmask = filter nodes based on specific class
includesubtypes = If true subtypes of the reference (ref) are also included

get_referenced_nodes (*refs=31, direction=<BrowseDirection.Both: 2>, nodeclassmask=<NodeClass.Unspecified: 0>, includesubtypes=True*)
returns referenced nodes based on specific filter Parameters are the same as for get_references

get_type_definition()
returns type definition of the node.

get_path (*max_length=20, as_string=False*)
Attempt to find path of node from root node and return it as a list of Nodes. There might several possible paths to a node, this function will return one Some nodes may be missing references, so this method may return an empty list Since address space may have circular references, a max length is specified

get_parent()
returns parent of the node. A Node may have several parents, the first found is returned. This method uses reverse references, a node might be missing such a link, thus we will not find its parent.

get_child (*path*)
get a child specified by its path from this node. A path might be: * a string representing a qualified name.
* a qualified name * a list of string * a list of qualified names

read_raw_history (*starttime=None, endtime=None, numvalues=0*)
Read raw history of a node result code from server is checked and an exception is raised in case of error If numvalues is > 0 and number of events in period is > numvalues then result will be truncated

history_read (*details*)
Read raw history of a node, low-level function result code from server is checked and an exception is raised in case of error

read_event_history (*starttime=None, endtime=None, numvalues=0, evtipes=2041*)
Read event history of a source node result code from server is checked and an exception is raised in case of error If numvalues is > 0 and number of events in period is > numvalues then result will be truncated

history_read_events (*details*)
Read event history of a node, low-level function result code from server is checked and an exception is raised in case of error

```
delete (delete_references=True)  
    Delete node from address space  
add_folder (nodeid, bname)  
add_object (nodeid, bname, objecttype=None)  
add_variable (nodeid, bname, val, varianttype=None, datatype=None)  
add_object_type (nodeid, bname)  
add_variable_type (nodeid, bname, datatype)  
add_data_type (nodeid, bname, description=None)  
add_property (nodeid, bname, val, varianttype=None, datatype=None)  
add_method (*args)  
add_reference_type (parent, nodeid, bname)  
call_method (methodid, *args)
```

High level functions to create nodes

```
opcua.common.manage_nodes.create_data_type (parent, nodeid, bname, description=None)  
    Create a new data type to be used in new variables, etc .. arguments are nodeid, browsename or namespace  
    index, name  
  
opcua.common.manage_nodes.create_folder (parent, nodeid, bname)  
    create a child node folder arguments are nodeid, browsename or namespace index, name  
  
opcua.common.manage_nodes.create_method (parent, *args)  
    create a child method object This is only possible on server side!! args are nodeid, browsename,  
    method_to_be_called, [input argument types], [output argument types] or idx, name, method_to_be_called,  
    [input argument types], [output argument types] if argument types is specified, child nodes advertising what  
    arguments the method uses and returns will be created a callback is a method accepting the nodeid of the parent  
    as first argument and variants after. returns a list of variants  
  
opcua.common.manage_nodes.create_object (parent, nodeid, bname, objecttype=None)  
    create a child node object arguments are nodeid, browsename, [objecttype] or namespace index, name, [object-  
    type] if objecttype is given (a NodeId) then the type node is instantiated inclusive its child nodes  
  
opcua.common.manage_nodes.create_object_type (parent, nodeid, bname)  
    Create a new object type to be instantiated in address space. arguments are nodeid, browsename or namespace  
    index, name  
  
opcua.common.manage_nodes.create_property (parent, nodeid, bname, val, varianttype=None,  
                                             datatype=None)  
    create a child node property args are nodeid, browsename, value, [variant type] or idx, name, value, [variant  
    type]  
  
opcua.common.manage_nodes.create_reference_type (parent, nodeid, bname)  
    Create a new reference type args are nodeid and browsename or idx and name  
  
opcua.common.manage_nodes.create_variable (parent, nodeid, bname, val, varianttype=None,  
                                             datatype=None)  
    create a child node variable args are nodeid, browsename, value, [variant type], [data type] or idx, name, value,  
    [variant type], [data type]  
  
opcua.common.manage_nodes.create_variable_type (parent, nodeid, bname, datatype)  
    Create a new variable type args are nodeid, browsename and datatype or idx, name and data type
```

`opcua.common.manage_nodes.delete_nodes(server, nodes, recursive=False)`

Delete specified nodes. Optionally delete recursively all nodes with a downward hierachic references to the node

High level method related functions

`opcua.common.methods.call_method(parent, methodid, *args)`

Call an OPC-UA method. methodid is browse name of child method or the nodeid of method as a NodeId object arguments are variants or python object convertible to variants. which may be of different types returns a list of variants which are output of the method

`opcua.common.methods.to_variant(*args)`

`opcua.common.methods.uamethod(func)`

Method decorator to automatically convert arguments and output to and from variants

Subscription Class

class `opcua.common.subscription.Subscription` (*server, params, handler*)
Subscription object returned by Server or Client objects. The object represent a subscription to an opc-ua server. This is a high level class, especially `subscribe_data_change` and `subscribe_events` methods. If more control is necessary look at code and/or use `create_monitored_items` method.

create_monitored_items (*monitored_items*)
low level method to have full control over subscription parameters Client handle must be unique since it will be used as key for internal registration of data

deadband_monitor (*var, deadband_val, deadbandtype=1, queuesize=0, attr=<AttributeIds.Value: 13>*)
Method to create a subscription with a Deadband Value. Default deadband value type is absolute. Return a handle which can be used to unsubscribe :param var: Variable to which you want to subscribe :param deadband_val: Absolute float value :param deadbandtype: Default value is 1 (absolute), change to 2 for percentage deadband :param queuesize: Wanted queue size, default is 1

delete ()
Delete subscription on server. This is automatically done by Client and Server classes on exit

modify_monitored_item (*handle, new_samp_time, new_queuesize=0, mod_filter_val=-1*)
Modify a monitored item. :param handle: Handle returned when originally subscribing :param new_samp_time: New wanted sample time :param new_queuesize: New wanted queuesize, default is 0 :param mod_filter_val: New deadband filter value :return: Return a Modify Monitored Item Result

publish_callback (*publishresult*)

subscribe_data_change (*nodes, attr=<AttributeIds.Value: 13>*)
Subscribe for data change events for a node or list of nodes. default attribute is Value. Return a handle which can be used to unsubscribe If more control is necessary use `create_monitored_items` method

subscribe_events (*sourcenode=2253, evtypes=2041, evfilter=None*)
Subscribe to events from a node. Default node is Server node. In most servers the server node is the only one you can subscribe to. if `evtypes` is not provided, `evtype` defaults to `BaseEventType` if `evtypes` is a list or tuple of custom event types, the events will be filtered to the supplied types Return a handle which can be used to unsubscribe

unsubscribe (*handle*)

unsubscribe to datachange or events using the handle returned while subscribing if you delete subscription, you do not need to unsubscribe

Subpackages

opcua.client package

Submodules

opcua.client.client module

class `opcua.client.client.Client` (*url*, *timeout=4*)

Bases: `object`

High level client to connect to an OPC-UA server.

This class makes it easy to connect and browse address space. It attempts to expose as much functionality as possible but if you want more flexibility it is possible and advised to use `UaClient` object, available as `self.uaclient` which offers the raw OPC-UA services interface.

activate_session (*username=None*, *password=None*, *certificate=None*)

Activate session using either username and password or private_key

close_secure_channel ()

close_session ()

Close session

connect ()

High level method Connect, create and activate session

connect_and_find_servers ()

Connect, ask server for a list of known servers, and disconnect

connect_and_find_servers_on_network ()

Connect, ask server for a list of known servers on network, and disconnect

connect_and_get_server_endpoints ()
Connect, ask server for endpoints, and disconnect

connect_socket ()
connect to socket defined in url

create_session ()
send a CreateSessionRequest to server with reasonable parameters. If you want o modify settings look at code of this methods and make your own

create_subscription (*period, handler*)
Create a subscription. returns a Subscription object which allow to subscribe to events or data on server handler argument is a class with data_change and/or event methods. period argument is either a publishing interval in milliseconds or a CreateSubscriptionParameters instance. The second option should be used, if the opcua-server has problems with the default options. These methods will be called when notification from server are received. See example-client.py. Do not do expensive/slow or network operation from these methods since they are called directly from receiving thread. This is a design choice, start another thread if you need to do such a thing.

delete_nodes (*nodes, recursive=False*)

disconnect ()
High level method Close session, secure channel and socket

disconnect_socket ()

export_xml (*nodes, path*)
Export defined nodes to xml

static find_endpoint (*endpoints, security_mode, policy_uri*)
Find endpoint with required security mode and policy URI

find_servers (*uris=None*)
send a FindServer request to the server. The answer should be a list of servers the server knows about A list of uris can be provided, only server having matching uris will be returned

find_servers_on_network ()

get_endpoints ()

get_namespace_array ()

get_namespace_index (*uri*)

get_node (*nodeid*)
Get node using NodeId object or a string representing a NodeId

get_objects_node ()

get_root_node ()

get_server_node ()

import_xml (*path*)
Import nodes defined in xml

load_client_certificate (*path*)
load our certificate from file, either pem or der

load_private_key (*path*)
Load user private key. This is used for authenticating using certificate

load_type_definitions (*nodes=None*)

open_secure_channel (*renew=False*)

Open secure channel, if renew is True, renew channel

register_namespace (*uri*)

Register a new namespace. Nodes should in custom namespace, not 0. This method is mainly implemented for symmetry with server

register_server (*server, discovery_configuration=None*)

register a server to discovery server if discovery_configuration is provided, the newer register_server2 service call is used

send_hello ()

Send OPC-UA hello to server

server_policy_id (*token_type, default*)

Find PolicyId of server's UserTokenPolicy by token_type. Return default if there's no matching UserTokenPolicy.

server_policy_uri (*token_type*)

Find SecurityPolicyUri of server's UserTokenPolicy by token_type. If SecurityPolicyUri is empty, use default SecurityPolicyUri of the endpoint

set_password (*pwd*)

Set user password for the connection. initial password from the URL will be overwritten

set_security (*policy, certificate_path, private_key_path, server_certificate_path=None, mode=<MessageSecurityMode.SignAndEncrypt: 3>*)

Set SecureConnection mode. Call this before connect()

set_security_string (*string*)

Set SecureConnection mode. String format: Policy,Mode,certificate,private_key[,server_private_key] where Policy is Basic128Rsa15 or Basic256,

Mode is Sign or SignAndEncrypt certificate, private_key and server_private_key are

paths to .pem or .der files

Call this before connect()

set_user (*username*)

Set user name for the connection. initial user from the URL will be overwritten

class `opcua.client.client.KeepAlive` (*client, timeout*)

Bases: `threading.Thread`

Used by Client to keep the session open. OPCUA defines timeout both for sessions and secure channel

run ()

stop ()

opcua.client.ua_client module

Low level binary client

class `opcua.client.ua_client.UASocketClient` (*timeout=1, security_policy=<opcua.ua.uaprotocol_hand.SecurityPolicy object>*)

Bases: `object`

handle socket connection and send ua messages timeout is the timeout used while waiting for an ua answer from server

check_answer (*data, context*)

close_secure_channel ()

close secure channel. It seems to trigger a shutdown of socket in most servers, so be prepare to reconnect.
OPC UA specs Part 6, 7.1.4 say that Server does not send a CloseSecureChannel response and should just close socket

connect_socket (*host, port*)

connect to server socket and start receiving thread

disconnect_socket ()

open_secure_channel (*params*)

send_hello (*url*)

send_request (*request, callback=None, timeout=1000, message_type=b'MSG'*)

send request to server. timeout is the timeout written in ua header returns response object if no callback is provided

start ()

Start receiving thread. this is called automatically in connect and should not be necessary to call directly

class `opcua.client.ua_client.UaClient` (*timeout=1*)

Bases: `object`

low level OPC-UA client.

It implements (almost) all methods defined in opcua spec taking in argument the structures defined in opcua spec.

In this Python implementation most of the structures are defined in `uaprotocol_auto.py` and `uaprotocol_hand.py` available under `opcua.ua`

activate_session (*parameters*)

add_nodes (*nodestoadd*)

add_references (*refs*)

browse (*parameters*)

browse_next (*parameters*)

call (*methodstocall*)

close_secure_channel ()

close secure channel. It seems to trigger a shutdown of socket in most servers, so be prepare to reconnect

close_session (*deletesubscriptions*)

connect_socket (*host, port*)

connect to server socket and start receiving thread

create_monitored_items (*params*)

create_session (*parameters*)

create_subscription (*params, callback*)

delete_monitored_items (*params*)

delete_nodes (*params*)

delete_references (*refs*)

delete_subscriptions (*subscriptionids*)

```
disconnect_socket ()  
find_servers (params)  
find_servers_on_network (params)  
get_endpoints (params)  
history_read (params)  
modify_monitored_items (params)  
open_secure_channel (params)  
publish (acks=None)  
read (parameters)  
register_server (registered_server)  
register_server2 (params)  
send_hello (url)  
set_security (policy)  
translate_browsepaths_to_nodeids (browsepaths)  
write (params)
```

Module contents

opcua.common package

Submodules

opcua.common.event module

opcua.common.instantiate module

opcua.common.manage_nodes module

High level functions to create nodes

`opcua.common.manage_nodes.create_data_type` (*parent, nodeid, bname, description=None*)

Create a new data type to be used in new variables, etc .. arguments are nodeid, browsename or namespace index, name

`opcua.common.manage_nodes.create_folder` (*parent, nodeid, bname*)

create a child node folder arguments are nodeid, browsename or namespace index, name

`opcua.common.manage_nodes.create_method` (*parent, *args*)

create a child method object This is only possible on server side!! args are nodeid, browsename, method_to_be_called, [input argument types], [output argument types] or idx, name, method_to_be_called, [input argument types], [output argument types] if argument types is specified, child nodes advertising what arguments the method uses and returns will be created a callback is a method accepting the nodeid of the parent as first argument and variants after. returns a list of variants

`opcua.common.manage_nodes.create_object` (*parent, nodeid, bname, objecttype=None*)

create a child node object arguments are nodeid, browsename, [objecttype] or namespace index, name, [objecttype] if objecttype is given (a NodeId) then the type node is instantiated inclusive its child nodes

`opcua.common.manage_nodes.create_object_type` (*parent, nodeid, bname*)

Create a new object type to be instantiated in address space. arguments are nodeid, browsename or namespace index, name

`opcua.common.manage_nodes.create_property` (*parent, nodeid, bname, val, varianttype=None, datatype=None*)

create a child node property args are nodeid, browsename, value, [variant type] or idx, name, value, [variant type]

`opcua.common.manage_nodes.create_reference_type` (*parent, nodeid, bname*)

Create a new reference type args are nodeid and browsename or idx and name

`opcua.common.manage_nodes.create_variable` (*parent, nodeid, bname, val, varianttype=None, datatype=None*)

create a child node variable args are nodeid, browsename, value, [variant type], [data type] or idx, name, value, [variant type], [data type]

`opcua.common.manage_nodes.create_variable_type` (*parent, nodeid, bname, datatype*)

Create a new variable type args are nodeid, browsename and datatype or idx, name and data type

`opcua.common.manage_nodes.delete_nodes` (*server, nodes, recursive=False*)

Delete specified nodes. Optionally delete recursively all nodes with a downward hierachic references to the node

opcua.common.methods module

High level method related functions

`opcua.common.methods.call_method` (*parent, methodid, *args*)

Call an OPC-UA method. methodid is browse name of child method or the nodeid of method as a NodeId object arguments are variants or python object convertible to variants. which may be of different types returns a list of variants which are output of the method

`opcua.common.methods.to_variant` (**args*)

`opcua.common.methods.uamethod` (*func*)

Method decorator to automatically convert arguments and output to and from variants

opcua.common.node module

High level node object, to access node attribute and browse address space

class `opcua.common.node.Node` (*server, nodeid*)

Bases: `object`

High level node object, to access node attribute, browse and populate address space. Node objects are usefull as-is but they do not expose the entire OPC-UA protocol. Feel free to look at the code of this class and call directly UA services methods to optimize your code

add_data_type (*nodeid, bname, description=None*)

add_folder (*nodeid, bname*)

add_method (**args*)

add_object (*nodeid, bname, objecttype=None*)

add_object_type (*nodeid, bname*)

add_property (*nodeid, bname, val, varianttype=None, datatype=None*)

add_reference_type (*parent, nodeid, bname*)

add_variable (*nodeid, bname, val, varianttype=None, datatype=None*)

add_variable_type (*nodeid, bname, datatype*)

call_method (*methodid, *args*)

delete (*delete_references=True*)
Delete node from address space

get_access_level ()
Get the access level attribute of the node as a set of AccessLevel enum values.

get_array_dimensions ()
Read and return ArrayDimensions attribute of node

get_attribute (*attr*)
Read one attribute of a node result code from server is checked and an exception is raised in case of error

get_attributes (*attrs*)
Read several attributes of a node list of DataValue is returned

get_browse_name ()
Get browse name of a node. A browse name is a QualifiedName object composed of a string(name) and a namespace index.

get_child (*path*)
get a child specified by its path from this node. A path might be: * a string representing a qualified name.
* a qualified name * a list of string * a list of qualified names

get_children (*refs=33, nodeclassmask=<NodeClass.Unspecified: 0>*)
Get all children of a node. By default hierarchical references and all node classes are returned. Other reference types may be given: References = 31 NonHierarchicalReferences = 32 HierarchicalReferences = 33 HasChild = 34 Organizes = 35 HasEventSource = 36 HasModellingRule = 37 HasEncoding = 38 HasDescription = 39 HasTypeDefinition = 40 GeneratesEvent = 41 Aggregates = 44 HasSubtype = 45 HasProperty = 46 HasComponent = 47 HasNotifier = 48 HasOrderedComponent = 49

get_children_descriptions (*refs=33, nodeclassmask=<NodeClass.Unspecified: 0>, includesubtypes=True*)

get_data_type ()
get data type of node as NodeId

get_data_type_as_variant_type ()
get data type of node as VariantType This only works if node is a variable, otherwise type may not be convertible to VariantType

get_data_value ()
Get value of a node as a DataValue object. Only variables (and properties) have values. An exception will be generated for other node types. DataValue contain a variable value as a variant as well as server and source timestamps

get_description ()
get description attribute class of node

get_description_refs ()

get_display_name ()
get description attribute of node

get_encoding_refs ()

get_event_notifier()

Get the event notifier attribute of the node as a set of EventNotifier enum values.

get_methods()

return methods of node. properties are child nodes with a reference of type HasComponent and a NodeClass of Method

get_node_class()

get node class attribute of node

get_parent()

returns parent of the node. A Node may have several parents, the first found is returned. This method uses reverse references, a node might be missing such a link, thus we will not find its parent.

get_path(max_length=20, as_string=False)

Attempt to find path of node from root node and return it as a list of Nodes. There might several possible paths to a node, this function will return one Some nodes may be missing references, so this method may return an empty list Since address space may have circular references, a max length is specified

get_properties()

return properties of node. properties are child nodes with a reference of type HasProperty and a NodeClass of Variable

get_referenced_nodes(refs=31, direction=<BrowseDirection.Both: 2>, nodeclass-mask=<NodeClass.Unspecified: 0>, includesubtypes=True)

returns referenced nodes based on specific filter Paramters are the same as for get_references

get_references(refs=31, direction=<BrowseDirection.Both: 2>, nodeclass-mask=<NodeClass.Unspecified: 0>, includesubtypes=True)

returns references of the node based on specific filter defined with:

refs = ObjectId of the Reference direction = Browse direction for references nodeclassmask = filter nodes based on specific class includesubtypes = If true subtypes of the reference (ref) are also included

get_type_definition()

returns type definition of the node.

get_user_access_level()

Get the user access level attribute of the node as a set of AccessLevel enum values.

get_value()

Get value of a node as a python type. Only variables (and properties) have values. An exception will be generated for other node types.

get_value_rank()

Read and return ArrayDimensions attribute of node

get_variables()

return variables of node. properties are child nodes with a reference of type HasComponent and a NodeClass of Variable

history_read(details)

Read raw history of a node, low-level function result code from server is checked and an exception is raised in case of error

history_read_events(details)

Read event history of a node, low-level function result code from server is checked and an exception is raised in case of error

read_event_history(starttime=None, endtime=None, numvalues=0, evtypes=2041)

Read event history of a source node result code from server is checked and an exception is raised in case of error If numvalues is > 0 and number of events in period is > numvalues then result will be truncated

read_raw_history (*starttime=None, endtime=None, numvalues=0*)

Read raw history of a node result code from server is checked and an exception is raised in case of error If numvalues is > 0 and number of events in period is > numvalues then result will be truncated

set_array_dimensions (*value*)

Set attribute ArrayDimensions of node make sure it has the correct data type

set_attr_bit (*attr, bit*)

set_attribute (*attributeid, datavalue*)

Set an attribute of a node attributeid is a member of ua.AttributeIds datavalue is a ua.DataValue object

set_data_value (*value, varianttype=None*)

Set value of a node. Only variables(properties) have values. An exception will be generated for other node types. value argument is either: * a python built-in type, converted to opc-ua optionnaly using the varianttype argument. * a ua.Variant, varianttype is then ignored * a ua.DataValue, you then have full control over data send to server

set_event_notifier (*values*)

Set the event notifier attribute.

Parameters values – an iterable of EventNotifier enum values.

set_read_only ()

Set a node as read-only for clients. A node is always writable on server side.

set_value (*value, varianttype=None*)

Set value of a node. Only variables(properties) have values. An exception will be generated for other node types. value argument is either: * a python built-in type, converted to opc-ua optionnaly using the varianttype argument. * a ua.Variant, varianttype is then ignored * a ua.DataValue, you then have full control over data send to server

set_value_rank (*value*)

Set attribute ArrayDimensions of node

set_writable (*writable=True*)

Set node as writable by clients. A node is always writable on server side.

unset_attr_bit (*attr, bit*)

opcua.common.subscription module

high level interface to subscriptions

class `opcua.common.subscription.DataChangeNotif` (*subscription_data, monitored_item*)

Bases: object

To be send to clients for every datachange notification from server

class `opcua.common.subscription.SubHandler`

Bases: object

Subscription Handler. To receive events from server for a subscription This class is just a sample class. Whatever class having these methods can be used

data_change (*handle, node, val, attr*)

Deprecated, use datachange_notification

datachange_notification (*node, val, data*)

called for every datachange notification from server

event_notification (*event*)

called for every event notification from server

status_change_notification (*status*)

called for every status change notification from server

class `opcua.common.subscription.Subscription` (*server, params, handler*)

Bases: `object`

Subscription object returned by Server or Client objects. The object represent a subscription to an opc-ua server. This is a high level class, especially `subscribe_data_change` and `subscribe_events` methods. If more control is necessary look at code and/or use `create_monitored_items` method.

create_monitored_items (*monitored_items*)

low level method to have full control over subscription parameters Client handle must be unique since it will be used as key for internal registration of data

deadband_monitor (*var, deadband_val, deadbandtype=1, queuesize=0, attr=<AttributeIds.Value: 13>*)

Method to create a subscription with a Deadband Value. Default deadband value type is absolute. Return a handle which can be used to unsubscribe :param var: Variable to which you want to subscribe :param deadband_val: Absolute float value :param deadbandtype: Default value is 1 (absolute), change to 2 for percentage deadband :param queuesize: Wanted queue size, default is 1

delete ()

Delete subscription on server. This is automatically done by Client and Server classes on exit

modify_monitored_item (*handle, new_samp_time, new_queuesize=0, mod_filter_val=-1*)

Modify a monitored item. :param handle: Handle returned when originally subscribing :param new_samp_time: New wanted sample time :param new_queuesize: New wanted queuesize, default is 0 :param mod_filter_val: New deadband filter value :return: Return a Modify Monitored Item Result

publish_callback (*publishresult*)

subscribe_data_change (*nodes, attr=<AttributeIds.Value: 13>*)

Subscribe for data change events for a node or list of nodes. default attribute is Value. Return a handle which can be used to unsubscribe If more control is necessary use `create_monitored_items` method

subscribe_events (*sourcenode=2253, evtipes=2041, evfilter=None*)

Subscribe to events from a node. Default node is Server node. In most servers the server node is the only one you can subscribe to. if `evtypes` is not provided, `evtype` defaults to `BaseEventType` if `evtypes` is a list or tuple of custom event types, the events will be filtered to the supplied types Return a handle which can be used to unsubscribe

unsubscribe (*handle*)

unsubscribe to datachange or events using the handle returned while subscribing if you delete subscription, you do not need to unsubscribe

class `opcua.common.subscription.SubscriptionItemData`

Bases: `object`

To store useful data from a monitored item

opcua.common.uaerrors module

opcua.common.utils module

Helper function and classes that do not rely on opcua library. Helper function and classes depending on ua object are in `ua_utils.py`

```
class opcua.common.utils.Buffer (data, start_pos=0, size=-1)
    Bases: object

    alternative to io.BytesIO making debug easier and added a few convenience methods

    copy (size=-1)
        return a shadow copy, optionnaly only copy 'size' bytes

    read (size)
        read and pop number of bytes for buffer

    skip (size)
        skip size bytes in buffer

exception opcua.common.utils.NotEnoughData
    Bases: opcua.ua.uaerrors._base.UaError

exception opcua.common.utils.ServiceError (code)
    Bases: opcua.ua.uaerrors._base.UaError

exception opcua.common.utils.SocketClosedException
    Bases: opcua.ua.uaerrors._base.UaError

class opcua.common.utils.SocketWrapper (sock)
    Bases: object

    wrapper to make it possible to have same api for normal sockets, socket from asyncio, StringIO, etc....

    read (size)
        Receive up to size bytes from socket

    write (data)

class opcua.common.utils.ThreadLoop
    Bases: threading.Thread

    run an asyncio loop in a thread

    call_later (delay, callback)
        threadsafe call_later from asyncio

    call_soon (callback)

    create_server (proto, hostname, port)

    create_task (coro, cb=None)
        threadsafe create_task from asyncio

    run ()

    run_coro_and_wait (coro)

    run_until_complete (coro)
        threadsafe run_until_completed from asyncio

    start ()

    stop ()
        stop subscription loop, thus the subscription thread

opcua.common.utils.create_nonce (size=32)
```

opcua.common.xmlimporter module

add nodes defined in XML to address space format is the one from opc-ua specification

```
class opcua.common.xmlimporter.XmlImporter(server)
    Bases: object

    add_datatype(obj)

    add_method(obj)

    add_object(obj)

    add_object_type(obj)

    add_reference_type(obj)

    add_variable(obj)

    add_variable_type(obj)

    import_xml(xmlpath)
        import xml and return added nodes

    make_objects(node_dats)

    to_nodeid(nodeid)
```

opcua.common.xmlparser module

parse xml file from opcua-spec

```
class opcua.common.xmlparser.ExtObj
    Bases: object

class opcua.common.xmlparser.NodeData
    Bases: object

class opcua.common.xmlparser.RefStruct
    Bases: object

class opcua.common.xmlparser.XMLParser(xmlpath)
    Bases: object

    get_aliases()
        Return the used node aliases in this import file

    get_node_dats()

    get_used_namespaces()
        Return the used namespace uris in this import file

opcua.common.xmlparser.ua_type_to_python(val, uatype_as_str)
    Converts a string value to a python value according to ua_utils.
```

Module contents

opcua.crypto package

Submodules

opcua.crypto.security_policies module

```

class opcua.crypto.security_policies.Cryptography (mode=<MessageSecurityMode.Sign:
    2>)
    Bases: opcua.ua.uaprotocol_hand.CryptographyNone
    Security policy: Sign or SignAndEncrypt
    decrypt (data)
    encrypt (data)
    encrypted_block_size ()
        Size of encrypted text block for block cipher.
    min_padding_size ()
    padding (size)
        Create padding for a block of given size. plain_size = size + len(padding) + signature_size() plain_size =
        N * plain_block_size()
    plain_block_size ()
        Size of plain text block for block cipher.
    remove_padding (data)
    signature (data)
    signature_size ()
    verify (data, sig)
    vsignature_size ()

class opcua.crypto.security_policies.Decryptor
    Bases: object
    Abstract base class for decryption algorithm
    decrypt (data)
    encrypted_block_size ()
    plain_block_size ()

class opcua.crypto.security_policies.DecryptorAesCbc (key, init_vec)
    Bases: opcua.crypto.security_policies.Decryptor
    decrypt (data)
    encrypted_block_size ()
    plain_block_size ()

class opcua.crypto.security_policies.DecryptorRsa (client_pk, dec_fn, padding_size)
    Bases: opcua.crypto.security_policies.Decryptor
    decrypt (data)
    encrypted_block_size ()
    plain_block_size ()

class opcua.crypto.security_policies.Encryptor
    Bases: object
    Abstract base class for encryption algorithm

```

```
    encrypt (data)
    encrypted_block_size ()
    plain_block_size ()
class opcua.crypto.security_policies.EncryptorAesCbc (key, init_vec)
    Bases: opcua.crypto.security_policies.Encryptor
    encrypt (data)
    encrypted_block_size ()
    plain_block_size ()
class opcua.crypto.security_policies.EncryptorRsa (server_cert, enc_fn, padding_size)
    Bases: opcua.crypto.security_policies.Encryptor
    encrypt (data)
    encrypted_block_size ()
    plain_block_size ()
class opcua.crypto.security_policies.SecurityPolicyBasic128Rsa15 (server_cert,
                                                                    client_cert,
                                                                    client_pk,
                                                                    mode)
    Bases: opcua.ua.uaprotocol_hand.SecurityPolicy
    Security Basic 128Rsa15 A suite of algorithms that uses RSA15 as Key-Wrap-algorithm and 128-Bit (16 bytes)
    for encryption algorithms. - SymmetricSignatureAlgorithm - HmacSha1
        (http://www.w3.org/2000/09/xmlsig#hmac-sha1)

    •SymmetricEncryptionAlgorithm - Aes128 (http://www.w3.org/2001/04/xmlenc#aes128-cbc)
    •AsymmetricSignatureAlgorithm - RsaSha1 (http://www.w3.org/2000/09/xmlsig#rsa-sha1)
    •AsymmetricKeyWrapAlgorithm - KwRsa15 (http://www.w3.org/2001/04/xmlenc#rsa-1\_5)
    •AsymmetricEncryptionAlgorithm - Rsa15 (http://www.w3.org/2001/04/xmlenc#rsa-1\_5)
    •KeyDerivationAlgorithm - PSha1 (http://docs.oasis-open.org/ws-sx/ws-secureconversation/200512/dk/p\_
        sha1)
    •DerivedSignatureKeyLength - 128 (16 bytes)
    •MinAsymmetricKeyLength - 1024 (128 bytes)
    •MaxAsymmetricKeyLength - 2048 (256 bytes)
    •CertificateSignatureAlgorithm - Sha1

    If a certificate or any certificate in the chain is not signed with a hash that is Sha1 or stronger then the certificate
    shall be rejected.

    AsymmetricEncryptionURI = 'http://www.w3.org/2001/04/xmlenc#rsa-1_5'
    URI = 'http://opcfoundation.org/UA/SecurityPolicy#Basic128Rsa15'
    static encrypt_asymmetric (pubkey, data)
    make_symmetric_key (nonce1, nonce2)
    signature_key_size = 16
    symmetric_key_size = 16
```

```

class opcua.crypto.security_policies.SecurityPolicyBasic256(server_cert, client_cert,
                                                            client_pk, mode)
    Bases: opcua.ua.uaprotocol_hand.SecurityPolicy
    Security Basic 256 A suite of algorithms that are for 256-Bit (32 bytes) encryption, algorithms include: -
    SymmetricSignatureAlgorithm - HmacSha1
        (http://www.w3.org/2000/09/xmlsig#hmac-sha1)

    •SymmetricEncryptionAlgorithm - Aes256 (http://www.w3.org/2001/04/xmlenc#aes256-cbc)
    •AsymmetricSignatureAlgorithm - RsaSha1 (http://www.w3.org/2000/09/xmlsig#rsa-sha1)
    •AsymmetricKeyWrapAlgorithm - KwRsaOaep (http://www.w3.org/2001/04/xmlenc#rsa-oaep-mgf1p)
    •AsymmetricEncryptionAlgorithm - RsaOaep (http://www.w3.org/2001/04/xmlenc#rsa-oaep)
    •KeyDerivationAlgorithm - PSha1 (http://docs.oasis-open.org/ws-sx/ws-secureconversation/200512/dk/p\_
    sha1)
    •DerivedSignatureKeyLength - 192 (24 bytes)
    •MinAsymmetricKeyLength - 1024 (128 bytes)
    •MaxAsymmetricKeyLength - 2048 (256 bytes)
    •CertificateSignatureAlgorithm - Sha1

    If a certificate or any certificate in the chain is not signed with a hash that is Sha1 or stronger then the certificate
    shall be rejected.

    AsymmetricEncryptionURI = 'http://www.w3.org/2001/04/xmlenc#rsa-oaep'
    URI = 'http://opcfoundation.org/UA/SecurityPolicy#Basic256'
    static encrypt_asymmetric(pubkey, data)
    make_symmetric_key(nonce1, nonce2)
    signature_key_size = 24
    symmetric_key_size = 32

class opcua.crypto.security_policies.Signer
    Bases: object
    Abstract base class for cryptographic signature algorithm
    signature(data)
    signature_size()

class opcua.crypto.security_policies.SignerAesCbc(key)
    Bases: opcua.crypto.security_policies.Signer
    signature(data)
    signature_size()

class opcua.crypto.security_policies.SignerRsa(client_pk)
    Bases: opcua.crypto.security_policies.Signer
    signature(data)
    signature_size()

```

class `opcua.crypto.security_policies.Verifier`

Bases: `object`

Abstract base class for cryptographic signature verification

signature_size()

verify(*data, signature*)

class `opcua.crypto.security_policies.VerifierAesCbc`(*key*)

Bases: `opcua.crypto.security_policies.Verifier`

signature_size()

verify(*data, signature*)

class `opcua.crypto.security_policies.VerifierRsa`(*server_cert*)

Bases: `opcua.crypto.security_policies.Verifier`

signature_size()

verify(*data, signature*)

`opcua.crypto.security_policies.encrypt_asymmetric`(*pubkey, data, policy_uri*)

Encrypt data with pubkey using an asymmetric algorithm. The algorithm is selected by policy_uri. Returns a tuple (encrypted_data, algorithm_uri)

`opcua.crypto.security_policies.require_cryptography`(*obj*)

Raise exception if cryptography module is not available. Call this function in constructors.

opcua.crypto.uacrypto module

`opcua.crypto.uacrypto.cipher_aes_cbc`(*key, init_vec*)

`opcua.crypto.uacrypto.cipher_decrypt`(*cipher, data*)

`opcua.crypto.uacrypto.cipher_encrypt`(*cipher, data*)

`opcua.crypto.uacrypto.decrypt_rsa15`(*private_key, data*)

`opcua.crypto.uacrypto.decrypt_rsa_oaep`(*private_key, data*)

`opcua.crypto.uacrypto.der_from_x509`(*certificate*)

`opcua.crypto.uacrypto.encrypt_basic256`(*public_key, data*)

`opcua.crypto.uacrypto.encrypt_rsa15`(*public_key, data*)

`opcua.crypto.uacrypto.hmac_sh1`(*key, message*)

`opcua.crypto.uacrypto.load_certificate`(*path*)

`opcua.crypto.uacrypto.load_private_key`(*path*)

`opcua.crypto.uacrypto.p_sh1`(*secret, seed, sizes=()*)

Derive one or more keys from secret and seed. (See specs part 6, 6.7.5 and RFC 2246 - TLS v1.0) Lengths of keys will match sizes argument

`opcua.crypto.uacrypto.sh1_size`()

`opcua.crypto.uacrypto.sign_sh1`(*private_key, data*)

`opcua.crypto.uacrypto.verify_sh1`(*certificate, data, signature*)

`opcua.crypto.uacrypto.x509_from_der`(*data*)

```
opcua.crypto.uacrypto.x509_name_to_string(name)
```

```
opcua.crypto.uacrypto.x509_to_string(cert)  
    Convert x509 certificate to human-readable string
```

Module contents

Submodules

opcua.server.address_space module

class `opcua.server.address_space.AddressSpace`

Bases: `object`

The address space object stores all the nodes of the OPC-UA server and helper methods. The methods are thread safe

add_datachange_callback (*nodeid, attr, callback*)

add_method_callback (*methodid, callback*)

delete_datachange_callback (*handle*)

dump (*path*)

Dump address space as binary to file; note that server must be stopped for this method to work DO NOT DUMP AN ADDRESS SPACE WHICH IS USING A SHELF (`load_aspace_shelf`), ONLY CACHED NODES WILL GET DUMPED!

empty ()

Delete all nodes in address space

generate_nodeid (*idx=None*)

get_attribute_value (*nodeid, attr*)

keys ()

load (*path*)

Load address space from a binary file, overwriting everything in the current address space

load_aspace_shelf (*path*)

Load the standard address space nodes from a python shelf via LazyLoadingDict as needed. The `dump()` method can no longer be used if the address space is being loaded from a shelf

Note: Intended for slow devices, such as Raspberry Pi, to greatly improve start up time

make_aspace_shelf (*path*)

Make a shelf for containing the nodes from the standard address space; this is typically only done on first start of the server. Subsequent server starts will load the shelf, nodes are then moved to a cache by the LazyLoadingDict class when they are accessed. Saving data back to the shelf is currently NOT supported, it is only used for the default OPC UA standard address space

Note: Intended for slow devices, such as Raspberry Pi, to greatly improve start up time

set_attribute_value (*nodeid, attr, value*)

class opcua.server.address_space.**AttributeService** (*aspace*)

class opcua.server.address_space.**ViewService** (*aspace*)

Bases: object

browse (*params*)**translate_browsepaths_to_nodeids** (*browsepaths*)**opcua.server.binary_server module****opcua.server.binary_server_asyncio module**

Socket server forwarding request to internal server

class opcua.server.binary_server_asyncio.**BinaryServer** (*internal_server, hostname, port*)

Bases: object

set_policies (*policies*)**start** ()**stop** ()

opcua.server.internal_server module

Internal server implementing opcua interface. Can be used on server side or to implement binary/https opc-ua servers

```
class opcua.server.internal_server.InternalServer (shelffile=None)
    Bases: object

    add_endpoint (endpoint)

    create_session (name, user=<User.Anonymous: 1>, external=False)

    disable_history_data_change (node)
        Set attribute Historizing of node to False and stop storing data for history

    disable_history_event (source)
        Set attribute History Read of node to False and stop storing data for history

    dump_address_space (path)
        Dump current address space to path

    enable_history_data_change (node, period=datetime.timedelta(7), count=0)
        Set attribute Historizing of node to True and start storing data for history

    enable_history_event (source, period=datetime.timedelta(7), count=0)
        Set attribute History Read of object events to True and start storing data for history

    find_servers (params)

    get_endpoints (params=None, sockname=None)

    get_new_channel_id ()

    load_address_space (path)
        Load address space from path

    load_standard_address_space (shelffile=None)

    register_server (server, conf=None)

    register_server2 (params)

    setup_nodes ()
        Set up some nodes as defined by spec

    start ()

    stop ()

    subscribe_server_callback (event, handle)
        Create a subscription from event to handle

    unsubscribe_server_callback (event, handle)
        Remove a subscription from event to handle

class opcua.server.internal_server.InternalSession (internal_server, aspace, submgr,
                                                    name, user=<User.Anonymous: 1>, external=False)

    Bases: object

    activate_session (params)

    add_method_callback (methodid, callback)

    add_nodes (params)

    add_references (params)
```

```

browse (params)
call (params)
close_session (delete_subs=True)
create_monitored_items (params)
create_session (params, sockname=None)
create_subscription (params, callback)
delete_monitored_items (params)
delete_nodes (params)
delete_references (params)
delete_subscriptions (ids)
get_endpoints (params=None, sockname=None)
history_read (params)
modify_monitored_items (params)
publish (acks=None)
read (params)
republish (params)
translate_browsepaths_to_nodeids (params)
write (params)
class opcua.server.internal_server.ServerDesc (serv, cap=None)
    Bases: object
class opcua.server.internal_server.SessionState
    Bases: enum.Enum
    An enumeration.
    Activated = 1
    Closed = 2
    Created = 0

```

opcua.server.internal_subscription module

server side implementation of a subscription object

```

class opcua.server.internal_subscription.InternalSubscription (subservice, data,  

                                                                 addressspace, call-  

                                                                 back)
    Bases: object
    enqueue_datachange_event (mid, eventdata, maxsize)
    enqueue_event (mid, eventdata, maxsize)
    enqueue_statuschange (code)
    has_published_results ()
    publish (acks)

```

```
    publish_results()
    republish(nb)
    start()
    stop()

class opcua.server.internal_subscription.MonitoringItemData
    Bases: object

class opcua.server.internal_subscription.MonitoringItemService(isub, aspace)
    Bases: object

    implement monitoringitem service for 1 subscription

    create_monitoring_items(params)

    datachange_callback(handle, value, error=None)

    deadband_callback(values, flt)

    delete_all_monitoring_items()

    delete_monitoring_items(ids)

    modify_monitoring_items(params)

    trigger_datachange(handle, nodeid, attr)

    trigger_event(event)

    trigger_statuschange(code)

class opcua.server.internal_subscription.MonitoringItemValues
    Bases: object

    get_current_value()

    get_old_value()

    set_current_value(cur_val)

class opcua.server.internal_subscription.WhereClauseEvaluator(logger, aspace,
                                                              whereclause)
    Bases: object

    eval(event)
```

opcua.server.server module

High level interface to pure python OPC-UA server

```
class opcua.server.server.Server(shelffile=None, iserver=None)
    Bases: object
```

High level Server class

This class creates an opcua server with default values

Create your own namespace and then populate your server address space using use the `get_root()` or `get_objects()` to get Node objects. and `get_event_object()` to fire events. Then start server. See `example_server.py` All methods are threadsafe

If you need more flexibility you call directly the Ua Service methods on the `iserver` or `iserver.isession` object members.

During startup the standard address space will be constructed, which may be time-consuming when running a server on a less powerful device (e.g. a Raspberry Pi). In order to improve startup performance, a optional path to a cache file can be passed to the server constructor. If the parameter is defined, the address space will be loaded from the cache file or the file will be created if it does not exist yet. As a result the first startup will be even slower due to the cache file generation but all further start ups will be significantly faster.

Variables

- **application_uri** (*uri*) –
- **product_uri** (*uri*) –
- **name** (*string*) –
- **default_timeout** (*InternalServer*) – timeout in milliseconds for sessions and secure channel
- **iserver** – internal server object
- **bserver** (*BinaryServer*) – binary protocol server
- **nodes** (*Shortcuts*) – shortcuts to common nodes

allow_remote_admin (*allow*)

Enable or disable the builtin Admin user from network clients

create_custom_data_type (*idx, name, basetype=24, properties=None*)

create_custom_event_type (*idx, name, basetype=2041, properties=None*)

create_custom_object_type (*idx, name, basetype=58, properties=None, variables=None, methods=None*)

create_custom_variable_type (*idx, name, basetype=62, properties=None, variables=None, methods=None*)

create_subscription (*period, handler*)

Create a subscription. returns a Subscription object which allow to subscribe to events or data on server

dehistorize_node_data_change (*node*)

Stop historizing supplied nodes; see history module Args:

node: node or list of nodes that can be historized (UA variables/properties)

Returns:

dehistorize_node_event (*node*)

Stop historizing events from node (typically a UA object); see history module Args:

node: node or list of nodes that can be historized (UA objects)

Returns:

delete_nodes (*nodes, recursive=False*)

disable_clock (*val=True*)

for debugging you may want to disable clock that write every second to address space

export_xml (*nodes, path*)

Export defined nodes to xml

export_xml_by_ns (*path, namespaces=None*)

Export nodes of one or more namespaces to an XML file. Namespaces used by nodes are always exported for consistency. Args:

server: opc ua server to use path: name of the xml file to write namespaces: list of string uris or int indexes of the namespace to export, if not provide all ns are used except 0

Returns:

find_servers (*uris=None*)

find_servers. mainly implemented for symmetry with client

get_client_to_discovery (*url='opc.tcp://localhost:4840'*)

Create a client to discovery server and return it

get_endpoints ()

get_event_generator (*etype=None, source=2253*)

Returns an event object using an event type from address space. Use this object to fire events

get_namespace_array ()

get all namespace defined in server

get_namespace_index (*uri*)

get index of a namespace using its uri

get_node (*nodeid*)

Get a specific node using NodeId object or a string representing a NodeId

get_objects_node ()

Get Objects node of server. Returns a Node object.

get_root_node ()

Get Root node of server. Returns a Node object.

get_server_node ()

Get Server node of server. Returns a Node object.

historize_node_data_change (*node, period=datetime.timedelta(7), count=0*)

Start historizing supplied nodes; see history module Args:

node: node or list of nodes that can be historized (variables/properties) period: time delta to store the history; older data will be deleted from the storage count: number of changes to store in the history

Returns:

historize_node_event (*node, period=datetime.timedelta(7), count=0*)

Start historizing events from node (typically a UA object); see history module Args:

node: node or list of nodes that can be historized (UA objects) period: time delta to store the history; older data will be deleted from the storage count: number of events to store in the history

Returns:

import_xml (*path*)

Import nodes defined in xml

link_method (*node, callback*)

Link a python function to a UA method in the address space; required when a UA method has been imported to the address space via XML; the python executable must be linked manually Args:

node: UA method node callback: python function that the UA method will call

Returns:

load_certificate (*path*)

load server certificate from file, either pem or der

load_private_key (*path*)

register_namespace (*uri*)

Register a new namespace. Nodes should in custom namespace, not 0.

register_to_discovery (*url='opc.tcp://localhost:4840', period=60*)

Register to an OPC-UA Discovery server. Registering must be renewed at least every 10 minutes, so this method will use our asyncio thread to re-register every period seconds if period is 0 registration is not automatically renewed

set_application_uri (*uri*)

Set application/server URI. This uri is supposed to be unique. If you intent to register your server to a discovery server, it really should be unique in your system! default is : “urn:freeopcua:python:server“

set_endpoint (*url*)

set_server_name (*name*)

start ()

Start to listen on network

stop ()

Stop server

subscribe_server_callback (*event, handle*)

unregister_to_discovery (*url='opc.tcp://localhost:4840'*)

stop registration thread

unsubscribe_server_callback (*event, handle*)

opcua.server.subscription_service module

server side implementation of subscription service

class `opcua.server.subscription_service.SubscriptionService` (*loop, aspace*)

Bases: object

create_monitored_items (*params*)

create_subscription (*params, callback*)

delete_monitored_items (*params*)

delete_subscriptions (*ids*)

modify_monitored_items (*params*)

publish (*acks*)

republish (*params*)

trigger_event (*event*)

opcua.server.uaprocessor module

class `opcua.server.uaprocessor.PublishRequestData`

Bases: object

class `opcua.server.uaprocessor.UaProcessor` (*internal_server, socket*)

Bases: object

close ()

to be called when client has disconnected to ensure we really close everything we should

```
forward_publish_response (result)  
open_secure_channel (algohdr, seqhdr, body)  
process (header, body)  
process_message (algohdr, seqhdr, body)  
send_response (requesthandle, algohdr, seqhdr, response, msgtype=b'MSG')  
set_policies (policies)
```

opcua.server.users module

Implement user managent here

```
class opcua.server.users.User  
    Bases: enum.Enum  
  
    Define some default users.  
  
    Admin = 0  
    Anonymous = 1  
    User = 3

Invalid = b'0'
Single = b'F'

class opcua.ua.uaprotocol_hand.CryptographyNone
    Bases: object

    Base class for symmetric/asymmetric cryptography

    decrypt (data)

    encrypt (data)

    encrypted_block_size ()
        Size of encrypted text block for block cipher.

    min_padding_size ()

    padding (size)
        Create padding for a block of given size. plain_size = size + len(padding) + signature_size() plain_size =
        N * plain_block_size()

    plain_block_size ()
        Size of plain text block for block cipher.

    remove_padding (data)

    signature (data)

    signature_size ()

    verify (data, signature)
        Verify signature and raise exception if signature is invalid

    vsignature_size ()

class opcua.ua.uaprotocol_hand.DataTypeAttributes
    Bases: opcua.ua.uaprotocol_auto.DataTypeAttributes

class opcua.ua.uaprotocol_hand.ReferenceTypeAttributes
    Bases: opcua.ua.uaprotocol_auto.ReferenceTypeAttributes

class opcua.ua.uaprotocol_hand.SecureConnection (security_policy)
    Bases: object

    Common logic for client and server

    close ()

```

is_open()

message_to_binary(*message*, *message_type*=b'MSG', *request_id*=0, *alghdr*=None)
Convert OPC UA secure message to binary. The only supported types are SecureOpen, SecureMessage, SecureClose if message_type is SecureMessage, the AlgorithmHeader should be passed as arg

open(*params*, *server*)
called on server side to open secure channel

receive_from_header_and_body(*header*, *body*)
Convert MessageHeader and binary body to OPC UA TCP message (see OPC UA specs Part 6, 7.1: Hello, Acknowledge or ErrorMessage), or a Message object, or None (if intermediate chunk is received)

receive_from_socket(*socket*)
Convert binary stream to OPC UA TCP message (see OPC UA specs Part 6, 7.1: Hello, Acknowledge or ErrorMessage), or a Message object, or None (if intermediate chunk is received)

select_policy(*uri*, *peer_certificate*, *mode*=None)

set_channel(*channel*)
Called on client side when getting secure channel data from server

set_policy_factories(*policies*)
Set a list of available security policies. Use this in servers with multiple endpoints with different security

tcp_to_binary(*message_type*, *message*)
Convert OPC UA TCP message (see OPC UA specs Part 6, 7.1) to binary. The only supported types are Hello, Acknowledge and ErrorMessage

class opcua.ua.uaprotocol_hand.**SecurityPolicy**
Bases: object
Base class for security policy
URI = 'http://opcfoundation.org/UA/SecurityPolicy#None'
make_symmetric_key(*a*, *b*)
signature_key_size = 0
symmetric_key_size = 0

class opcua.ua.uaprotocol_hand.**SecurityPolicyFactory**(*cls*=<class 'opcua.ua.uaprotocol_hand.SecurityPolicy'>, *mode*=<MessageSecurityMode.None_: 1>, *certificate*=None, *private_key*=None)
Bases: object
Helper class for creating server-side SecurityPolicy. Server has one certificate and private key, but needs a separate SecurityPolicy for every client and client's certificate
create(*peer_certificate*)
matches(*uri*, *mode*=None)

class opcua.ua.uaprotocol_hand.**SequenceHeader**
Bases: opcua.ua.uatypes._FrozenClass
static from_binary(*data*)
static max_size()
to_binary()

```

class opcua.ua.uaprotocol_hand.SymmetricAlgorithmHeader
    Bases: opcua.ua.uatypes._FrozenClass

    static from_binary (data)

    static max_size ()

    to_binary ()

class opcua.ua.uaprotocol_hand.VariableAttributes
    Bases: opcua.ua.uaprotocol_auto.VariableAttributes

class opcua.ua.uaprotocol_hand.VariableTypeAttributes
    Bases: opcua.ua.uaprotocol_auto.VariableTypeAttributes

class opcua.ua.uaprotocol_hand.ViewAttributes
    Bases: opcua.ua.uaprotocol_auto.ViewAttributes

```

opcua.ua.uatypes module

implement ua datatypes

```

class opcua.ua.uatypes.AccessLevel
    Bases: opcua.ua.uatypes._MaskEnum

    Bit index to indicate what the access level is.

    Spec Part 3, appears multiple times, e.g. paragraph 5.6.2 Variable NodeClass

    CurrentRead = 0

    CurrentWrite = 1

    HistoryRead = 2

    HistoryWrite = 3

    SemanticChange = 4

    StatusWrite = 5

    TimestampWrite = 6

class opcua.ua.uatypes.ByteStringNodeId (identifier, namespace=0)
    Bases: opcua.ua.uatypes.NodeId

class opcua.ua.uatypes.DataValue (variant=None, status=None)
    Bases: opcua.ua.uatypes._FrozenClass

    A value with an associated timestamp, and quality. Automatically generated from xml , copied and modified
    here to fix errors in xml spec

    Variables

        • Value (Variant) –

        • StatusCode (StatusCode) –

        • SourceTimestamp (datetime) –

        • SourcePicoSeconds (int) –

        • ServerTimestamp (datetime) –

        • ServerPicoSeconds (int) –

    static from_binary (data)

```

to_binary()

class opcua.ua.uatypes.**EventNotifier**

Bases: opcua.ua.uatypes._MaskEnum

Bit index to indicate how a node can be used for events.

Spec Part 3, appears multiple times, e.g. Paragraph 5.4 View NodeClass

HistoryRead = 2

HistoryWrite = 3

SubscribeToEvents = 0

opcua.ua.uatypes.**ExpandedNodeId**

alias of *NodeId*

class opcua.ua.uatypes.**ExtensionObject**

Bases: opcua.ua.uatypes._FrozenClass

Any UA object packed as an ExtensionObject

Variables

- **TypeId** (*NodeId*) –
- **Body** (*bytes*) –

static from_binary (*data*)

static from_object (*obj*)

to_binary()

ua_types = {'TypeId': 'NodeId', 'Body': 'ByteString', 'Encoding': 'Byte'}

class opcua.ua.uatypes.**FourByteNodeId** (*identifier, namespace=0*)

Bases: *opcua.ua.uatypes.NodeId*

opcua.ua.uatypes.**FrozenClass**

alias of *_FrozenClass*

class opcua.ua.uatypes.**GuidNodeId** (*identifier, namespace=0*)

Bases: *opcua.ua.uatypes.NodeId*

class opcua.ua.uatypes.**LocalizedText** (*text=None*)

Bases: opcua.ua.uatypes._FrozenClass

A string qualified with a namespace index.

static from_binary (*data*)

to_binary()

to_string()

ua_types = {'Text': 'String', 'Locale': 'String'}

class opcua.ua.uatypes.**NodeId** (*identifier=None, namespaceidx=0, nodeidtype=None*)

Bases: opcua.ua.uatypes._FrozenClass

NodeId Object

Args: identifier: The identifier might be an int, a string, bytes or a Guid namespaceidx(int): The index of the namespace nodeidtype(NodeIdType): The type of the nodeid if it cannot be guess or you want something special like twobyte nodeid or fourbytenodeid

Variables

- **Identifier** (*NodeId*) –
- **NamespaceIndex** (*Int*) –
- **NamespaceUri** (*String*) –
- **ServerIndex** (*Int*) –

static from_binary (*data*)

static from_string (*string*)

has_null_identifier ()

is_null ()

to_binary ()

to_string ()

class `opcua.ua.uaatypes.NodeIdType`

Bases: `enum.IntEnum`

An enumeration.

ByteString = 5

FourByte = 1

Guid = 4

Numeric = 2

String = 3

TwoByte = 0

class `opcua.ua.uaatypes.NumericNodeId` (*identifier, namespace=0*)

Bases: `opcua.ua.uaatypes.NodeId`

class `opcua.ua.uaatypes.QualifiedName` (*name=None, namespaceidx=0*)

Bases: `opcua.ua.uaatypes._FrozenClass`

A string qualified with a namespace index.

static from_binary (*data*)

static from_string (*string*)

to_binary ()

to_string ()

class `opcua.ua.uaatypes.StatusCode` (*value=0*)

Bases: `opcua.ua.uaatypes._FrozenClass`

Variables

- **value** (*int*) –
- **name** (*string*) –
- **doc** (*string*) –

check()

Raises an exception if the status code is anything else than 0 (good).

Use the `is_good()` method if you do not want an exception.

static from_binary(data)

is_good()

return True if status is Good.

to_binary()

class `opcua.ua.uaatypes.StringNodeId(identifier, namespace=0)`

Bases: `opcua.ua.uaatypes.NodeId`

class `opcua.ua.uaatypes.TwoByteNodeId(identifier)`

Bases: `opcua.ua.uaatypes.NodeId`

class `opcua.ua.uaatypes.ValueRank`

Bases: `enum.IntEnum`

Defines dimensions of a variable. This enum does not support all cases since ValueRank support any $n > 0$ but since it is an IntEnum it can be replace by a normal int

Any = -2

FourDimensions = 4

OneDimension = 1

OneOrMoreDimensions = 0

Scalar = -1

ScalarOrOneDimension = -3

ThreeDimensions = 3

TwoDimensions = 2

class `opcua.ua.uaatypes.Variant(value=None, varianttype=None, dimensions=None, is_array=None)`

Bases: `opcua.ua.uaatypes._FrozenClass`

Create an OPC-UA Variant object. if no argument a Null Variant is created. if not variant type is given, attempts to guess type from python type if a variant is given as value, the new objects becomes a copy of the argument

Variables

- **Value** (Any supported type) –
- **VariantType** (VariantType) –
- **Dimension** –
- **is_array** (If the variant is an array. Usually guessed from value.) –

static from_binary(data)

to_binary()

class `opcua.ua.uaatypes.VariantType`

Bases: `enum.Enum`

The possible types of a variant.

Variables

- *Null* –
- *Boolean* –
- *SByte* –
- *Byte* –
- *Int16* –
- *UInt16* –
- *Int32* –
- *UInt32* –
- *Int64* –
- *UInt64* –
- *Float* –
- *Double* –
- *String* –
- *DateTime* –
- *Guid* –
- *ByteString* –
- *XmlElement* –
- *NodeId* –
- *ExpandedNodeId* –
- *StatusCode* –
- *QualifiedName* –
- *LocalizedText* –
- *ExtensionObject* –
- *DataValue* –
- *Variant* –
- *DiagnosticInfo* –

Boolean = 1

Byte = 3

ByteString = 15

DataValue = 23

DateTime = 13

DiagnosticInfo = 25

Double = 11

ExpandedNodeId = 18

ExtensionObject = 22

Float = 10

```
Guid = 14
Int16 = 4
Int32 = 6
Int64 = 8
LocalizedText = 21
NodeId = 17
Null = 0
QualifiedName = 20
SByte = 2
StatusCode = 19
String = 12
UInt16 = 5
UInt32 = 7
UInt64 = 9
Variant = 24
XmlElement = 16
```

```
class opcua.ua.uaetypes.VariantTypeCustom(val)
    Bases: object
```

Looks like sometime we get variant with other values than those defined in VariantType. FIXME: We should not need this class, as far as I understand the spec variants can only be of VariantType

```
class opcua.ua.uaetypes.WriteMask
    Bases: opcua.ua.uaetypes._MaskEnum

    Bit index to indicate which attribute of a node is writable
    Spec Part 3, Paragraph 5.2.7 WriteMask

    AccessLevel = 0
    ArrayDimensions = 1
    BrowseName = 2
    ContainsNoLoops = 3
    DataType = 4
    Description = 5
    DisplayName = 6
    EventNotifier = 7
    Executable = 8
    Historizing = 9
    InverseName = 10
    IsAbstract = 11
    MinimumSamplingInterval = 12
```

```

NodeClass = 13
NodeId = 14
Symmetric = 15
UserAccessLevel = 16
UserExecutable = 17
UserWriteMask = 18
ValueForVariableType = 21
ValueRank = 19
WriteMask = 20

```

class `opcua.ua.uatypes.XmlElement` (*value=None, binary=None*)
 Bases: `opcua.ua.uatypes._FrozenClass`
 An XML element encoded as an UTF-8 string.

static from_binary (*data*)

to_binary ()

`opcua.ua.uatypes.datatype_to_varianttype` (*int_type*)
 Takes a NodeId or int and return a VariantType This is only supported if *int_type* < 63 due to VariantType encoding At low level we do not have access to address space thus decoding is limited a better version of this method can be find in `ua_utils.py`

`opcua.ua.uatypes.extensionobject_from_binary` (*data*)
 Convert binary-coded ExtensionObject to a Python object. Returns an object, or None if TypeId is zero

`opcua.ua.uatypes.extensionobject_to_binary` (*obj*)
 Convert Python object to binary-coded ExtensionObject. If *obj* is None, convert to empty ExtensionObject (TypeId = 0, no Body). Returns a binary string

`opcua.ua.uatypes.flatten` (*mylist*)

`opcua.ua.uatypes.flatten_and_get_shape` (*mylist*)

`opcua.ua.uatypes.get_default_value` (*vtype*)
 Given a variant type return default value for this type

`opcua.ua.uatypes.get_extensionobject_class_type` (*typeid*)
 Returns the registered class type for typeid of an extension object

`opcua.ua.uatypes.get_shape` (*mylist*)

`opcua.ua.uatypes.get_win_epoch` ()

`opcua.ua.uatypes.register_extension_object` (*name, nodeid, class_type*)
 Register a new extension object for automatic decoding and make them available in `ua` module

`opcua.ua.uatypes.reshape` (*flat, dims*)
